Hongming Qiu (Henry)

217-974-0166 career@cbcicada.com linkedin.com/in/hongming-qiu-bb8b73292 github.com/CBCicada

Education

University of Illinois Urbana-Champaign

M.S. in Electrical and Computer Engineering (Thesis) — *Expected May 2028*

B.S. in Computer Engineering | Overall GPA: 3.99/4.00 | Highest Honors | Bronze Tablet — *August 2026*

Research Experience

Kernel Security Researcher — **September 2025 – Present**

UIUC | Advisor: Prof. Tianyin Xu | In collaboration with IBM Research [code] [LPC '26 talk]

- Designed and implemented Linux IMA extensions for policy-controlled **eBPF measurement and appraisal**, including TPM-backed attestation, PKCS#7 signature verification, and policy predicates over program and attachment types.
- Built **race-safe reappraisal and revocation** of resident eBPF programs using retained integrity metadata and RCU; removed references across links, pins, file descriptors, tail-call maps, and cgroup attachments.
- Integrated signed loading and recovery with **Cilium**; evaluated vulnerable datapath remediation and a concealed eBPF rootkit with zero residual programs across 34 purge configurations; wrote the resulting manuscript as first author.
- Reproducing OS-CFI's origin-sensitive design to evaluate **eBPF-based Linux kernel control-flow integrity**.

LLVM-Based Static Malware Detection Research — **February 2025 – Present**

Independent Research | Three-person team [code]

- Co-developed a polymorphic LLVM framework to evaluate **static antivirus evasion** on Windows and Linux.
- Designed **EliminateIAT** to rewrite imports through LoadLibrary/GetProcAddress stubs, preserving invoke control flow and variadic calls; led MSVC/LLVM integration for complex Windows codebases.
- Designed **Masquerade** to copy sections and imports from benign Windows programs and keep them from being removed during linking; improved string obfuscation to support complex access patterns.
- Evaluated 1,160 artifacts from seven malware families against up to 76 VirusTotal engines; measured **95.5% mean inter-build byte divergence** and sub-1% mean detection for the strongest pass combinations.

Selected Systems Projects

RISC-V Operating System Kernel | *C/C++, RISC-V Assembly* — **2024; 2026 – Present**

- Built a C kernel (ECE 391) with processes, IPC, and drivers; ported Doom and Rogue to student-built kernels.
- Porting and redesigning the kernel in **C++23** for ECE 498OS, introducing **RAII synchronization**, smart-pointer ownership, kernel-backed C++ runtime support, and polymorphic I/O interfaces.

Out-of-Order RISC-V Processor | *SystemVerilog, ECE 411, Team of 3* — **Spring 2026**

- Co-designed and verified a **2-way superscalar RV32IM processor** with explicit register renaming, split load/store queues, store forwarding, pipelined caches, and early branch recovery.
- Implemented **gshare and return-address prediction**, reducing branch mispredictions from about **60% to 10%**; sustained **over 1 IPC** on compression and ray-tracing benchmarks at 500 MHz within 300,000 μm^2.

Teaching & Leadership

ECE 391 Teaching Assistant — **January 2025 – Present**

ECE Department, University of Illinois Urbana-Champaign

- Promoted from Course Assistant to TA; support **20+ students weekly** in a 250+ student RISC-V OS course.
- Cut autograder runtime in **half** across all test cases by removing redundant runs and caching builds.

Admin & Purple Team Lead — **September 2023 – Present**

SIGPwny, cybersecurity club at the University of Illinois Urbana-Champaign

- Authored **25+ reverse-engineering and exploitation challenges** for UIUCTF and SIGPwny; led advanced security workshops for 50+ club members.
- Built and managed a Proxmox range with **20+ VMs**, segmented networks, a pfSense firewall, and VPN access.

Technical Skills

Languages: C, C++, Python, Bash, x86 and RISC-V Assembly, SystemVerilog
Systems: Linux kernel, eBPF, LLVM, IMA, TPM, RCU, Cilium, operating systems, container networking
Security: Program analysis, reverse engineering, binary exploitation, exploit development
Certifications: OSED, OSCP+, Certified CyberDefender (CCD)
